

Assignment - 407 Trip Calculator

Exercise - Create a simple toll calculator Write a program that calculates the cost of a vehicle driving from one point on 407ETR, to another point. For this exercise, the toll rate will be `$0.25/km`. Please use the file `interchanges.json` to calculate the distances between interchanges.

Note: Please provide instructions on how to execute the program and unit tests. As well, please provide a link to your online repository (i.e. Github)

Example execution:

```
> costOfTrip('QEW', 'Highway 400')
Distance: ??
Cost: ??

> costOfTrip('Salem Road', 'QEW')
Distance: ??
Cost: ??

> costOfTrip('QEW', 'Salem Road')
Distance: ??
Cost: ??
```
